## **BRACKETT** *R-2 Series VI End Sheet Machine*

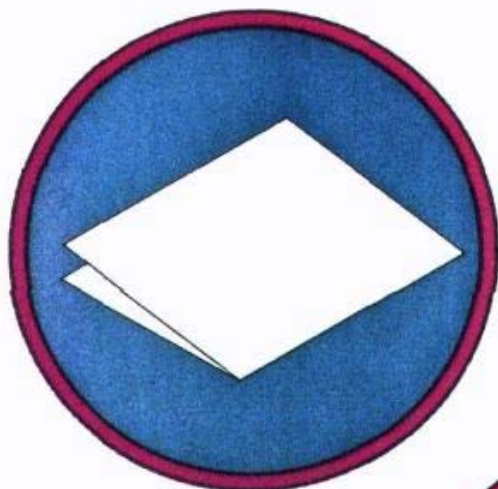

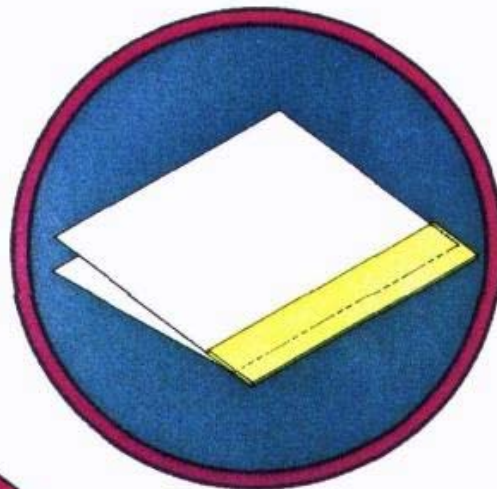

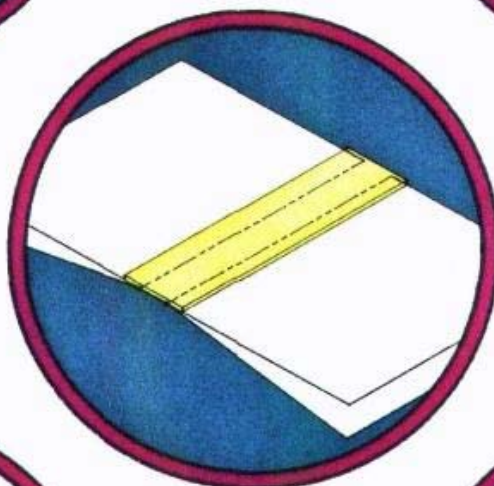

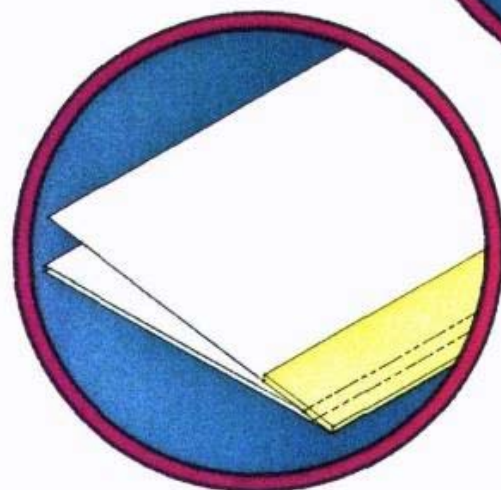

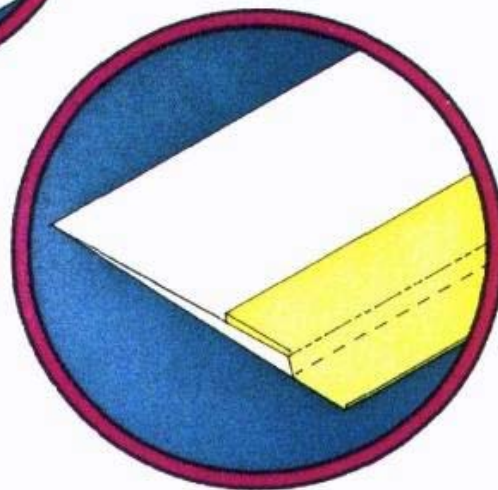

### **BRACKETT** “R-2” END-SHEET MACHINE

The Brackett R-2 is a high performance production machine for end sheet manufacturing. It can turn out up to 28,800 unprinted, 11-inch, individual folded end sheets per hour (14,400 combined end sheets per hour) while handling a wide variety of end paper stocks. The R-2 is built to Brackett's exacting standards ensuring reliability, ease of operation, economy and quick production changeover. Cut-off length changeovers are as easy as dialing in the length you want. Accuracy is assured through the utilization of a proven servo driven variable length cut-off system. Even the pre-melter and powered slitters for trimming the web are furnished as standard components of this machine. Additionally, independent electro-pneumatic tension controls have been added to each folding shoe roll stand for precise and automatic paper web tension control throughout the paper roll diameter.

Please contact our sales team to find out what the **R-2** can do for YOUR bottom line:
